

## Energy Efficiency has arrived in our homes

In December 2011, Royal Decree 1699/2011 which regulates the connection to the Grid of small-scale electricity generation facilities was approved.

This change in the legislation implies that from this point forward, also households with low/basic consumption might be benefited from the advantages of using “clean energy”.

**EFFI HOUSE** offers the following advantages:

- Generate your own energy
- Control and management of generated and consumed energy
- Up to 60% of the energy consumption can be saved\*
- Protect the environment while reducing your energy costs – reasonable homes consume “clean energy”

\* the savings are double: consumers do not have to buy that energy elsewhere; possible discount on the electricity bill thanks to the NET METERING, which counts the exceeding energy produced and fed into the grid (subjected to effective national legislation)

- Efficient solutions available at a cost of only 2.500 €
- Investment's pay-back is reached through savings
- Financing available with low repayments
- 10-year equipment warranty
- Monitoring and verification during 2 years
- Ecologic investment which increases the economic value of your house
- Transparency and geographic independence - user-friendly web interface with full data of energy production and consumption of your property, accessible from any place in the world

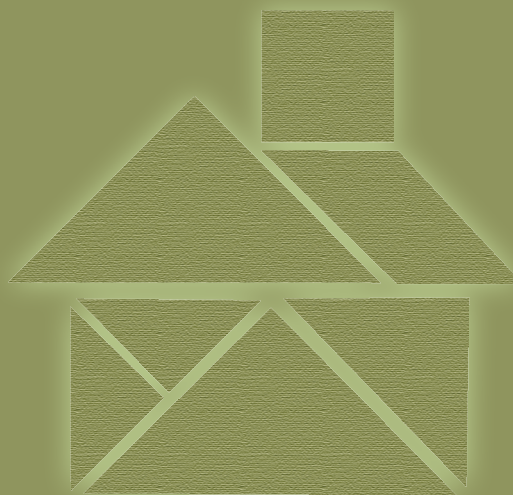

## Generating eco-friendly energy for private consumption

The sharp increase of energy prices together with the lack of energy resources has become one of the most important problems that families face nowadays. Over the last eight years, the price of electricity has increased roughly 60%, a tendency clearly expected to worsen.

The solution is in our hands calls for more awareness of consumption and self-produced energy. Therefore SERNOVEN suggests EFFI HOUSE.
